Education

Birla Institute of Technology and Science, Pilani

BE (HONS.) IN COMPUTER SCIENCE AND ENGINEERING

Pilani, India

Aug. 2015 - Dec. 2018

Delhi Public School, Gurgaon

SENIOR SECONDARY SCHOOL

Gurgaon, India

2013 - 2015

Work Experience

IBM Research

RESEARCH ENGINEER

SCALING AI

Delhi, India

August 2019 - Present

- Working with the Model compression team to make AI faster.
- Worked with Watson NLU product team to reduce inference time of BERT for entities tagging.
- Contributed to the implementation of *PowerBERT*, a new model that is **4.5x faster** than **BERT** for inference.
- This work was published in **ICML'20**, and was integrated into IBM OneNLP product stack.
- Worked with biotechnology researchers to build a fast bulk RNA sequencing pipeline for **COVID-19** research.
- Currently working on large scale training of Temporal Graph Convolutional Networks (**GCN**) to detect money laundering.
- Co-invented 2 patents on model compression techniques and multiobjective optimisation.

ETH Zurich

SCIENTIFIC ASSISTANT

HIGH PERFORMANCE COMPUTING FOR DEEP LEARNING

Zurich, Switzerland

March 2019 - August 2019

- Worked on accelerating training process of Deep Neural Networks using the **DACE** language developed in-house.
- DACE is a domain specific language for HPC workloads that uses a novel Stateful Dataflow Graph (SDFG) based Intermediate Representation.
- Many graph based transformations can be done on this SDFG IR, and generate fast code for heterogenous platforms.
- Wrote a Tensorflow frontend for DACE that parses a TF computation graph to build a DACE SDFG.
- Achieved at-par performance for ResNet-50 in comparison to TF and CUDNN.

INRIA

BACHELOR THESIS

PARALLEL PROGRAMMING

Grenoble, France

September 2018 - February 2019

- Developed **Kvik**: a task based middleware in the **Rust** language.
- **Kvik** provides tunable task splitting strategies that can be composed with each other.
- Wrote a state-of-the art parallel sort implementation using Kvik, that scaled up to 64 threads.
- It offered 1.65x more speedup than GNU parallel sort, and 2x more speedup compared to C++20 ParallelSTL sort with Intel TBB.
- This work has been submitted to **PPoPP'21**.

IBM Research

RESEARCH INTERN

SCALING AI

New Delhi, India

May 2018 - July 2018

- Implemented the **GoogleNet** with variable batch sizing and activation checkpointing.
- This led to a 20% reduction in training time under memory constraints.
- Also worked on various optimisation heuristics for decomposition of sparse tensors.
- These outperformed best known heuristics in literature by 30%.

BITS Pilani

RESEARCH ASSISTANT

PARALLELIZING COMPILERS

Pilani, India

August 2017 - December 2018

- Worked on the DWARF domain specific language compiler developed in-house.
- The compiler parallelizes code for various data mining applications, written in the DWARF language.
- Contributed to the modelling of various data dependencies in the context of density based and hierarchical clustering algorithms.
- Finally deployed a new optimisation layer that increased the granularity of parallelism.
- The system hence achieved linear speedup for DBSCAN, SNN, and RECOME clustering algorithms.

UST global

RESEARCH INTERN

DEEP LEARNING FOR CYBERSECURITY

- Developed a malware detection engine using a deep belief network (DBN).
- Achieved an accuracy of 89.1 and true positive rate of 98.2.
- This project was presented to Cyberdome, Kerala Police and led to a MoU between UST Global and Cyberdome for future research.

Trivandrum, India

June 2017 - August 2017

Team Anant - A nanosatellite development team

Pilani, India

TEAM LEAD, ON BOARD COMPUTING

EMBEDDED SYSTEMS

January 2016 - January 2018

- Contributed to the development of an on board computer for a nanosatellite.
- Lead a group of ten students to this effect.
- Built a fault tolerant software to run complex monitoring and control algorithms for the satellite.
- Several device drivers for the Linux kernel were built from scratch to interface sensors and actuators on the satellite bus.
- The satellite will be launched by the Indian Space Research Organisation.

Honors & Awards

- 2020 **Winner**, Awesome Team Award - IBM India Research Lab
- 2018 **Winner**, Best Poster Award - IBM India Research Lab
- 2017 **Winner**, Mercedes Benz Hack.Banglore 2018
- 2016 **Winner**, Best Paper Award - APOGEE (BITS Pilani's technical festival)

Presentations

Mobile World Congress 2018

Barcelona, Spain

PRESENTER FOR DAIMLER AG

February 2018

- Invited by Daimler AG to present our winning hackathon prototype at the MWC.
- The prototype was built to detect pedestrians using low cost IR sensors.
- This would allow for level 4+ automated driving.

Skills

Languages	Rust, Python, C, C++, Java
Frameworks	PyTorch, Tensorflow, Caffe, CuDNN, Git
HPC Libraries	openMPI, openMP, Intel TBB
